## Beiter Components - The Choice of Champions at the Rio Olympics

*The Beiter name is synonymous with German engineering and precision plastic moulding. For over 30 years Beiter products have been used by the elite of the Worlds Recurve and Compound Archers.*

*In the Rio Games last August*  
*-109 of all 128 archers used a **BEITER BUTTON***  
*-113 used the **BEITER CLICKER***  
*-86 used **BEITER NOCKS***

*Reliability and accuracy of Beiter Products is a key reason for this exceptional dominance amongst top shooters. In addition to these actual components Beiter produce a range of ancilliary tools for fitting and maintaining Nocks, Clickers, and Buttons: and for checking out your bow and its tuning. Other Beiter products for the serious archer include Serving Tools and Nocking Points for Bowstrings as well as Arrow Rests. Attention to detail and function is present in all these products.*

To sum up Beiter Products in a word ... **ACCURACY**, a key to success in archery.

Insert Beiter Nocks are available as well as the Pin Nock Variety
